CORREVON FILS "FLORAIRE" SEEDS

Sec. 562, P. L. & R.

Ralph R. Shaw, Librarian,
Library, U.S. Dept. of Agric.,
Washington 25,
D.C.

CORREVON-AMERICAN

MOORESTOWN, NEW JERSEY, U.S.A.

CORREVON - AMERICAN

All seeds here listed are from the famed Floraire Nurseries of the Correvons in Switzerland, founded by that great horticulturist, the late Henri Correvon, now operating under the management of Aymon Correvon. All seeds are supplied in original sealed packets, just as received by us from Switzerland. All are of latest available crop. A limited supply of each will be stocked by us at our seedhouse in Moorestown, New Jersey, this stock being replenished when necessary by fresh forwardings from our Swiss principal.

Orders will be filled promptly from stock on hand to largest extent possible. Any kinds temporarily sold out of the American stock, will be carried on memorandum back order, and will be sent on separately when next new lot arrives from Correvon of Switzerland.

Please remit with order, by money order, postal note, or personal check. When remittance is by bank check, add 10¢ to the total to cover various costs in connection with records and collection. Orders of less than One Dollar are not acceptable.

Although CORREVON-AMERICAN is a division of the business of REX. D. PEARCE, seedsman, all orders and remittances for Correvon seeds should be made separately, directly, and only, to

CORREVON-AMERICAN
Moorestown, New Jersey.

ANOTHER CHOICE- Since some of the sorts on any considerable order may be sold out when that order arrives, it is advisable to few other kinds to your list from which any necessary substitute selection may be made. We do not substitute without customer's permission.

MEANING OF KEY LETTERS AND NUMERALS as used in descriptions below. "r" indicates plant suitable for rock garden. "b" indicates plant for use in mixed hardy border. "k" shows that seeds should be sown outside in very early spring. "kt" is as "k", but may also be sown outdoors in late autumn. "y" indicates seeds that should be sown in late autumn in outdoor seed bed or unheated frame. "yt" is as "y", but sowings may also be made at first possible moment of spring, in open. "x" indicates kinds that may be sown anytime from mid-spring to early autumn. Numeral in parenthesis indicates approximate season of bloom, as (1), early spring; (2), late spring to early summer; (3), in the summer months; (4) autumn. Numeral following parentheses indicates average height of well-grown specimen in inches.

WE REMIND AGAIN- Keep your orders for seeds from Correvon (Correvon-American, Moorestown, N.J.), and those for seeds from Pearce (Rex. D. Pearce, Moorestown, N.J.), altogether separate, separate envelopes, separate remittances. Though Correvon-American is a division of the Rex. D. Pearce business, it is operated as a separate unit through-out.

ABOUT PRICES- Mr. Aymon Correvo, manager of the Floraire Nursery in Switzerland, makes up the prices in this offer, basing them, of course, on the relative plentifulness or rarity of the item, and on the cost of producing it. In some instances seeds of the same species may be listed in the catalog of Rex. D. Pearce at a slightly different price, either higher or lower, here again based upon factors of cost and rarity as they show in this country. Bear in mind that when you order from Correvo-American, you get only Correvo seeds from Switzerland. When you order Rex. D. Pearce seeds, you get seeds produced on the Rex. D. Pearce Nursery at Old Orchard, or elsewhere, but not Swiss seeds. Where a species appears on both lists, you can choose the source you prefer.

14. Acantholimon androsaceum; 15. Primula rosea Visser de Geers; 16. Nymphaea alba; 17. Saxifraga longifolia; 18. Armeria caespitosa; 19. Saxifraga cochlearis; 20. Androsace hirtella.
